Getting oriented in the price list

This page contains prices for the basic services DPD Classic (ideal for sending parcels between companies or their branches), DPD Private (recommended for e-shops when sending parcels to private addresses), Pickup (recommended for e-shops when sending parcels to Pickup points/boxes) and Express Services (services with fast and guaranteed delivery). On the following page, you will find prices for additional services.

Calculating the transport price

The price depends on the parcel weight and it does not include the toll fee and fuel surcharge (their current amounts are available at www.dpd.cz).

Important parameters of the parcel

Weight (max. 20 kg for the Pickup service, max. 31.5 kg for all our services), Length of the longest side (max. 100 cm for the Pickup service in case of delivery to Pickup point, 67 cm in case of delivery to Parcel locker and max. 175 cm for all our other services) and Girth (max. 250 cm for Pickup points and 300 cm for all our other services). Girth is calculated according to the following formula $2 \times \text{width} + 2 \times \text{height} + \text{length}$. The maximum dimensions for the Pickup service in case of delivery to a Parcel locker are $67 \times 41 \times 56$ cm.
